Survey Report

Inform your community
Engage your citizenry
Inspire greatness

November 20, 2009

Brought to you by:

Letter from the Founder

Hello. My name is Paul Butcher and I'm the founder of Community Insight and the Best Places to Live Program.

The first thing I'd like to do is to take this opportunity to not only thank, but also congratulate Mi-Ai Parrish and Roger Plohow. These two individuals are the Publishers of the Idaho Statesman (Boise) and the Post Register (Idaho Falls), the two largest newspapers in the state. These two individuals had the vision and the courage to invest in something new in order to help their communities establish a powerful feedback loop between the citizens and the institutions that serve the citizens, facilitated by the local newspapers.

So Mi-Ai and Roger, thank you.

The second thing I'd like to do is to thank and congratulate all the people that participated in the survey. Without your belief in the process and contribution of your time and opinions, none of this would be possible.

Thank you all.

Finally, I believe that all else being equal, better information will lead to better decisions which will yield better results. I believe this model applies to communities just as well as it does to commercial enterprises. However, instead of measuring the results in dollars as commercial enterprises do, communities must measure the success in terms of citizen satisfaction.

With that premise in mind, I created a process I believe measures the will of the people within a community and communicates the results. I'm optimistic that once the results are communicated they will then be used by civic and business leaders in their decision making processes as they go about establishing priorities and allocating resources.

Without any further delay, ladies and gentlemen, I present to you the results from the first Community Insight Best Places to Live Program Citizen Satisfaction survey.

Enjoy.

Paul Butcher
President

Introduction

Well...are they? Are the citizens satisfied? Are our politicians living up to the citizens' expectations? Can we trust them? What are the community's strengths? What are the weaknesses? This survey reveals insights into the opinions of the communities from which we received a sufficient number of responses.

The purpose of the Community Insight Best Places to Live Program's surveys is to inform the community, engage the community, and inspire the community to better informed action. Better information leads to better decisions, which yield better results. By conducting unbiased, affordable, and as statistically valid survey research as possible, Community Insight surveys will stimulate debate, cut through the clutter, and allow opinions and perceptions to form based on facts.

The only way the Community Insight Best Places to Live Program can achieve its purpose is to establish an affordable, timely, and accurate means of surveying within communities. To this end, Community Insight surveys ask respondents if they would like to join the Community Insight panel and have us retain their email address in order to inform them of future community surveying opportunities. Over time, as this panel becomes larger and more representative of the populations it purports to represent, the level of accuracy (i.e. Margin of Error and Level of Confidence) of the surveys will approach, if not reach, that of telephone-based surveys for the general population.

To date, nearly 4,000 individuals from across the state have agreed to join the Community Insight panel. Most members are from the Treasure Valley.

Statistical Validity

Statistics enable the accurate estimations of the opinions of a larger group (population) based on those of a smaller group (sample). The estimated accuracy of predictions is reflected in two concepts associated with any survey-based research. These concepts are margin of error (MOE) and level of confidence (LOC). These concepts interact as follows. If a survey claims to have a MOE of 3% with a LOC of 95% for a given population (e.g., the general population, a special sub-group such as "newspaper readers", etc.) this means that if the survey were repeated 100 times using the same techniques and processes, the estimated percentages for the stated population would vary by no more than 3 percentage points up or down 95 times. The other 5 times, the estimated percentages may vary more than 3 percentage points up or down.

For the Community Insight Best Places to Live Citizen Satisfaction survey the estimated MOE is 5% with a LOC of 90% for the general populations of Idaho Falls and Boise, (n=670 and 424 respectively). For readers of the Idaho Statesman and Post Register, the reported numbers have a higher degree of accuracy, having a MOE of 3% with a LOC of 95%. Although Meridian is reported in the City Satisfaction section, they received too few completed surveys to have their margin of error and level of confidence estimated reliably. So, although their information is interesting, it shouldn't be interpreted as having the same margin of error and level of confidence as that of Boise and Idaho Falls.

The results of the City Satisfaction section of the survey were weighted to the Census data for the three cities for which we collected more than 100 surveys. Refer to Appendix A for a more detailed discussion about the weighting performed upon the data from this survey.

A MOE and LOC are only estimated for the general populations of the cities of Boise and Idaho Falls. All other results should be considered as only reflecting the opinions of the readers of the particular newspapers.

POPULUS

Executive Summary

In this section, I highlight my opinions about what comparisons are of particular interest. Specific questions from the survey cited in this section are shown in *italics* enclosed in parentheses.

Since the idea of recruiting respondents from newspaper readers is a relatively new approach to surveying, two major intersections with the City of Boise's Citizen Satisfaction survey from the spring of 2009 were designed. The idea being that if the results from the Best Places to Live Citizen Satisfaction survey are predominantly similar to the City of Boise's survey, then the confidence in the accuracy of the Best Places to Live survey will be confirmed. Recognizing that there has been a lag of nearly 9 months between the collection of the data for the City of Boise and the Best Places to Live surveys which could account for some differences.

The questions that were identical are citydirection, and 20 of the 32 items in the importance / satisfaction / gap section (aspectsatisfaction, aspectimportance).

The city of Boise survey used the telephone to collect 511 completed responses. The results of this survey are available at <http://www.cityofboise.org/Departments/Mayor/PDF/2009CitizenSurvey.pdf>. This survey measured 25 issues facing Boise and, based on the respondent feedback and a proprietary analysis, identified the top eight (see p. 31 of the city of Boise report). The top four are shown below.

1. Jobs / Economic Opportunities (68%)
2. Planning for Growth (55%)
3. Adequacy of Public Transportation (49%)
4. Air Pollution (49%)

The POPULUS Citizen Satisfaction survey measured 32 items using a different methodology (gap analysis explained later in this document) to identify the significance of the aspects. Twenty of the items measured were also measured in the city of Boise survey. The POPULUS survey identified the same four issues as the top four issues and in the same order as did the city of Boise survey. Furthermore, the city of Boise survey gave items 3 and 4 above nearly identical scores, as did the POPULUS Citizen Satisfaction survey (9.3, 8.9, 7.9, and 7.8 respectively).

The other intersection based on the citydirection question, which again is remarkably similar, is detailed later in this report.

The information contained in this report isn't being presented as the be-all-end-all of citizen opinions. The accuracy of this survey, when applied to general populations outside of newspaper readers, isn't high enough to reliably permit detailed analyses and projections. As such, with a MOE of +/- 5%, people shouldn't obsess over specific percentages reported as they can fluctuate by 5 percentage points up or down.

However, I believe the results are accurate enough for general populations outside of newspaper readers to be strong indications of general citizen preferences, broad brush strokes if you will, and that if further investment and refinement is made, this tool can evolve into a very robust and highly accurate general population citizen satisfaction surveying tool. As it evolves, this tool will get closer and closer to delivering on the initial objective of increased community citizen satisfaction through information, engagement, and inspiration.

City Satisfaction

When it comes to overall satisfaction with the three cities for which we gathered more than 100 surveys, Boise (n=670) residents appear to be the least satisfied with 83% either satisfied or very satisfied, versus 87% for Idaho Falls (N=424), and 88% for Meridian (n=114). The one significant difference is that the top box score (very satisfied) for each city reveals an apparently less enthusiastic satisfaction for Meridian (25%) versus 44% for Boise and 43% for Idaho Falls (*cityoverall*).

At the same time as being the least enthusiastic relative to their overall satisfaction, Meridian residents are very content with the direction their city is headed (80% top two boxes somewhat / strongly headed in the right direction) versus 63% for Boise and 74% for Idaho Falls.

It seems clear that Boise residents, relative to Idaho Falls and Meridian, are less satisfied with their current situation and much less content with the direction the city is headed. However, it would appear that Boise's numbers on these two questions, in an absolute sense, appear to be high. The apparent shortcomings on these two questions may be a result of being compared to two cities with very contented citizens overall.

Each of the three cities for which more than 100 surveys were obtained has a unique set of MOST IMPORTANT issues with which to deal. The MOST and LEAST important issues from the 13 shown in the survey, for each of the three cities, are shown below (*cityissue*).

| City | Top 5 Issues | Bottom 5 Issues |
|---------------------|--|--|
| Boise (n=670) | <ol style="list-style-type: none"> 1. Public transportation (19.2%) 2. Unemployment / bad economy (19.0%) 3. Sprawl (16.2%) 4. Pollution (10.2%) 5. Supporting current and attracting new businesses (7.9%) | <ol style="list-style-type: none"> 13. Road expansion / upkeep and maintenance (1.6%) 12. Planning / annexation / zoning (1.9%) 11. Crime (2.1%) 10. Budget cutbacks / funding (2.1%) 9. Government trust / accountability (2.8%) |
| Idaho Falls (n=424) | <ol style="list-style-type: none"> 1. Schools / education (26.5%) 2. Crime (11.3%) 3. Government trust / accountability (9.0%) 4. Traffic / congestion (8.7%) 5. (tie) Sprawl AND Supporting current and attracting new businesses (8.3%) | <ol style="list-style-type: none"> 13. Pollution (0%) 12. Budget cuts / funding (1.7%) 11. Planning / annexation / zoning (3.1%) 10. Road expansion / upkeep and maintenance (3.8%) 9. Public transportation (4.0%) |
| Meridian (n=114) | <ol style="list-style-type: none"> 1. Traffic / congestion (21.9%) 2. Sprawl (18.4%) 3. Unemployment / bad economy (12.3%) 4. Schools / education (10.5%) 5. Public transportation (8.8%) | <ol style="list-style-type: none"> 13. Budget cuts / funding (0%) 12. Pollution (1.8%) 11. Government size / taxes (1.8%) 10 & 9. (3-way tie) Government trust / accountability AND Planning / annexation / zoning AND Crime (2.6%) |

The survey contained a Gap Analysis section. This section attempts to identify those aspects of a city that are not only relatively more important, but relatively less satisfied as well. This should help city leaders determine what is driving dissatisfaction and satisfaction of their citizenry. Each respondent was asked to state their level of importance with each of 32 questions related to some specific aspect of life in the city using a 5-point scale where 1 = very dissatisfied and 5 = very satisfied. Then, each respondent was asked to select their level of satisfaction with each of those same 32 aspects on a 5-point scale where 1 = very unimportant and 5 = very important.. The 'gap' for each aspect was computed as (importance – satisfaction) * importance. The importance was multiplied by the subtraction result in order to distinguish between similar scores for aspects with dissimilar levels of importance. For instance, if the subtraction result of two items both are '2' yet one aspect has an importance of 4 and the other an importance of 3, weighting the result using the importance will result in the aspect with an importance of 4 having a gap of 8 while the aspect with an importance of 3 will have a gap of 6. This would indicate that more satisfaction can be generated by addressing the aspect with a gap of 8 before the aspect with a gap of 6.

The biggest gaps are just as revealing as the smallest gaps. The biggest gaps represent the best opportunities for improving satisfaction within each city just as the smallest gaps represent the strengths of each city (*aspectimportance* and *aspectsatisfaction*).

Boise's top five opportunities for improvement are based on the Gap Analysis are:

1. Jobs and economic opportunities
2. Good planning for future growth
3. Getting around by public transportation
4. Quality of air
5. Safety of transportation by bike

Boise's top five strengths are:

1. Shopping opportunities
2. Recreation opportunities
3. City parks walking distance from home
4. Housing available close to where you work
5. Being a good place to raise children.

Idaho Falls' top five opportunities for improvement are:

1. Amount of crime
2. Good planning for future growth
3. Quality of public education (K-12)
4. Jobs and economic opportunities
5. Get around by public transportation.

Idaho Falls' top five strengths are:

1. Housing available close to where you work
2. Preservation of and access to natural areas and open space
3. Shopping opportunities
4. The quality of the air
5. City parks walking distance from home.

For Meridian, the top five opportunities are

1. Good planning for future growth
2. Safety of transportation by bike
3. Jobs and economic opportunities
4. Get around by public transportation
5. Traffic signal timing.

The top five strengths are:

1. Shopping opportunities
2. Housing available close to where you work
3. Availability of city recreational opportunities for youth
4. City parks walking distance from home
5. Entertainment opportunities.

All three cities receive high marks from residents for both seeing themselves living in the city 5 years from now and recommending the city to close friends and family as a good place to live (cityconclude). When it comes to only considering a new residence from within the city, the marks drop considerably from the respondents' intention to stay and recommend, with Meridian's scores dropping the most.

| | | Total | 3.06 | 2.77 | 2.45 | 2.49 | 3.13 |

A couple of observations related to the Political Trust set of questions. First, for the most part, city level officials are the most trusted across the political spectrum, with a few exceptions. Liberals trust the President more than any other political official and moderates trust him about the same as their city officials. Within the cities of Idaho Falls and Boise, the political party of the Mayor appears to have a lot to do with the amount of trust. Where the Mayor is a republican, conservatives will trust more. Where the Mayor is a democrat, liberals will trust more. Meridian is somewhat of an anomaly since the level of trust among liberals, moderates, and conservatives is virtually identical. However, since Meridian only achieved 114 completed surveys, their numbers aren't as precise as those for Boise and Idaho Falls.

How to pay for governmental budget shortfalls

There were four questions in the survey that explored citizens' preferred methods of paying for government. The same seven options were available for each of the city, county, state, and federal levels of government (cityservicepayment, otherservicepayment). Three of the seven options focused on increasing revenue, three focused on reducing expenses, and one focused on borrowing money. Each respondent could select up to three options per question.

What the citizens have said, resoundingly, is that they do not want to borrow money to cover budget shortfalls. Period. Less than 7% of respondents selected the debt financing option for every level of government.

One observation from the responses to this question is how people are primarily focused on raising revenue the closer they are to home. As the question moves from the city level through the county and state levels to the national level, peoples' preferences move from raising revenue to cutting expenses.

Charging user fees and eliminating services are usually the top selected options, except at the city level where 'raise my taxes' is dead even with reducing or eliminating services. Charging user fees at the federal level, although still the second most preferred method, is significantly lower than at other levels of government.

Percentages and totals are based on respondents.

a Dichotomy group tabulated at value 1.

Region Ratings

Respondents were shown a list of 7 items from which to choose their most and least favorite thing about where they live (regionfavorite).

Most Favorite Things:

For western Idaho the top three are:

1. Overall quality of life (73%)
2. Weather (8%)
3. Location (8%)

For eastern Idaho the top three are:

1. Overall quality of life (67%).
2. Location (13%)
3. Cost of Living (8%)

Least Favorite Things:

For western Idaho the top three are:

1. Career Opportunities (34%)
2. Something Else (30%)
3. Availability of Cultural Opportunities (14%).

For eastern Idaho the top three are:

1. Something Else (28%)
2. Weather (25%)
3. Career Opportunities 22%).

A detailed analysis has not been performed related to the respondent supplied text for the Something Else option for the Least Favorite Thing. However, upon a cursory review, it appears that the number one Something Else for eastern Idaho is the influence of the LDS church. For western Idaho it's pretty evenly split between Traffic, Environment, and Public Transportation.

The overall quality of life in the region (regionQOL) was split identically between western and eastern Idaho. About 83% in both regions say the quality of life in their region is either excellent or above average, approximately 27% in each region selecting excellent.

Newspaper Satisfaction

Most of the analyses done below would be enhanced significantly with more detailed information related to the specific subgroups to target for new strategies and tactics.

It appears that local newspaper readership is high (94% IS, 96% PR) but we must remember these are newspaper readers responding (paperqualify). The Existing Panel (EP) sample is much more telling in that local newspaper readership drops to 78%. Unfortunately, there is still a large portion of the EP that came from newspaper readers during the Vision for the Valley survey. A large portion of the table also comes from non-newspaper sources (primarily the Idaho Shakespeare Festival email list and the Best Places to Work in Idaho program).

The bottom line is that we know readership is much lower than is indicated by the numbers on this question. Efforts are still underway to breakout the EP respondents by specific sample source. If sufficient numbers are obtained from non-newspaper sources, we may be able to provide an accurate general population number for local newspaper readership. Initial estimates are that approximately 1/3 of EP respondents were recruited from newspaper readers.

The vast majority of the EP respondents are not Post Register readers (95.5% - readpapers_r2) so any usage of this sample sources data must take this into consideration.

The newspaper is still the preferred source for local advertising and news for all groups of newspaper readers (mainmedia_r1, mainmedia_r2). I suspect that television surpasses the newspaper for local news with the general population, at least for the Idaho Statesman, and particularly for the younger demographic groups.

It appears that as market size decreases reliance on the local newspaper for local news and advertising increases. The difference between the local newspaper reliance between the IS and PR readers is nearly 10 percentage points. This variation could be due to other causes, such as perceived differences in quality within each newspaper's market.

9% of the IS readers also read the PR at least once per week (readpapers_r1, readpapers_r2) whereas only 2% of PR readers also read the IS. This could be due to intra-state migration and people retaining some connection to their 'home' region.

The majority of readers for both newspapers read it for at least 6 days per week (75% IS, 82% PR). This also supports the increase in reliance as market size drops.

The satisfaction with newspapers appears to indicate that PR readers are significantly more satisfied with their newspaper than are IS readers (PR: 50% top two boxes / 24% bottom two boxes; IS: 41% top two boxes / 33% bottom two boxes) (paperoverall). Certainly more analyses in this area could yield specific subgroups of readers that present the best opportunity for marketing campaigns in order to improve satisfaction and hopefully readership and reliance.

When it comes to the ‘leaning’ of the paper, there aren’t too many surprises (paperleaning). Conservatives in general believe both papers are too liberal and liberals believe the papers are too conservative. Conservatives hold these beliefs much more strongly than do liberals. Moderates hold a middle position, but still tend toward too liberal. It’s clear that the newspapers haven’t figured out a way yet to satisfy both groups. So...what should be done with this information? It’s clear that to do nothing will not change people’s perceptions of the newspaper. Perhaps addressing this criticism head-on might make some headway. As this program matures and more data are gathered covering more timeframes and more markets, I’m hopeful that some best practices can be identified that may help balance the perceived ‘leanings’ of the newspapers.

The two newspapers appear to have strikingly similar ratings among the liberals, moderates, and conservatives within their own markets. However, the moderates within the two markets perceive the PR to be more liberal than the IS.

What does each paper cover well and cover poorly. Both newspapers top three coverage topics include ‘Outdoor Activities’ and ‘Places to go and Things to do’. However, the IS’s top three also includes ‘College Sports’ (aka BSU) whereas the PR’s top three is rounded out with a tie between ‘Regional Growth and Development’ and ‘News about Local Technology Businesses and Issues’.

The lowest scored items indicate the best opportunities for improvement and can help direct the development of strategies and tactics to improve satisfaction. The bottom three coverage areas for the IS are: ‘News from your own neighborhoods’; ‘Local topics you can’t find anywhere else’; and, ‘City and county government and politics’. The bottom three coverage areas for the PR are: ‘News from your own neighborhoods’; ‘News from your town or community’; ‘Local college sports’; and, ‘Local topics you can’t find anywhere else’. Four items are listed for the PR since there was a tie.

Readers seem to believe that the papers aren’t ‘local’ enough. This finding would seem to indicate that implementing the Community Insight Best Places to Live Program’s surveys may significantly improve the readers’ perception of the two newspapers, as long as readers are reminded that the results are local, exclusive information about their neighborhoods, towns, and communities.

One weakness of the advertisinginfo questions is the lack of distinction between ‘Internet’ and ‘Newspaper Website’. This will be corrected in future iterations. Without this distinction, it’s not possible to determine if people using the ‘Internet’ are actually using the newspaper’s Website (or one of its partners) to find information. This shortcoming may explain the high ‘Internet’ scores for information related to new and used automobiles.

One thing we can say is that ‘Internet’ is a much bigger factor for the Idaho Statesman than the Post Register.

There are still a few categories where the newspaper is the hands down predominant source of information from local newspaper readers. These are, in order;

1. Entertainment and things to do
2. Groceries
3. Movie times and listings

Current Topics

From an initial review of the current topics (currentgrid) a few items jump out.

The Boise trolley question was broken out in more detail to show that it appears that the general consensus of Boise residents is negative toward the idea. Idaho Falls and meridian are much more negative toward the idea.

Everyone surveyed seems to believe that bicyclists should be forced to follow the traffic laws. Although no one seems to feel too strongly that bicyclists should be licensed and help contribute to the cost of road maintenance.

There is a strong indication among newspaper readers that road agencies could do more to make roads safe for bicyclists.

The 'Cash for Clunkers' program appears to be perceived as helping auto dealers, but falling short in achieving air quality improvements and being managed well.

Survey Effectiveness as an Engagement Mechanism

Regarding the perceived effectiveness of this survey as a community tool to 'accurately represent the opinions of the majority' (opiniongather) and to be the 'most convenient way for people to participate in the governmental process' (participate) the survey was seen as a significant contribution.

Nearly two thirds of respondents believe that 'scientific surveys sponsored by an independent organization with no political affiliations' is the best way to accurately represent the opinions of the majority (64%) followed by town hall style meetings (20%). In addition, scientific surveys was the preferred method of conveniently participating (40%) followed by email (28%).

There is strong evidence to suggest that this survey is seen as a positive contributor to the community since it was the highest rated item for each of these questions.

One caveat to this conclusion is the fact that only people that responded to this survey answered this question. One could argue that extrapolating this to the general population, or even to those that read the paper, might be a shaky one. But, in the absence of evidence to the contrary, and given the overwhelming preference for the survey tool for both of these purposes, I believe it's safe to presume that a truly general population based survey would still result in the survey being the most highly rated technique.

One other finding related to this question is the appearance that as the city size shrinks, the preference for town-hall style meetings increases as a means of representing the opinions of the majority. As a convenient way to participate, town hall style meetings rank near the bottom at 2%.

Health Care (Idaho Falls only)

In general, people believe they pay too much for health care but are fairly satisfied with the quality of care they receive and they access they have to specialists (healthgrid2).

Although a number of differences exist between the beliefs of conservatives and liberals when it comes to health care, there are a few items upon which everyone seems to agree.

1. It should be mandatory for all members of congress to participate in whatever federal plan is put in place.
2. Everyone is scared to be without health insurance.
3. Everyone is in agreement that there is a significant amount of waste in the current system that could be eliminated.
4. Our situation isn't hopeless and something can be done to improve our health care system.
5. Everyone seems to agree that the present situation can get much worse.
6. Not too many people agree with the notion of mandatory health insurance.

Finally, when it comes to paying for health care reform, there are significant differences in the approach favored by liberal versus conservatives. Liberals prefer to increase governmental revenue (i.e., increase taxes). Conservatives favor a cost reduction approach including the elimination of non-health care related governmental expenditures, reducing wages and benefits for government employees, and laying off federal employees. As with other budget considerations, no one is in favor of borrowing money to finance health care.

Demographics

Regarding the demographics, it should come as no surprise to anyone that the newspaper readers that responded were older, wealthier, and better educated than the general population. Getting feedback from the less educated, lower income, and younger demographics is a challenge that we'll continue to face in the future.

Tactical Review

It appears that the banner ad on the Post Register online edition was much more effective at recruiting participants. Likewise, the size of the Post Register ad was significantly larger than that of the Idaho Statesman and again, appears to have been more effective. I would suggest that these two techniques be applied to future Idaho Statesman surveys in order to increase the participation rate.

One other possibility for this observation is the ‘newness’ of the Program to the Post Register.

Detailed Results

This document contains the survey questions for the Community Insight – Best Places to Live Program – Citizen Satisfaction survey.

The Best Places to Live Program is a high-profile community improvement program available to newspapers that increases each newspaper's local relevance. The program also creates additional revenue opportunities through sponsorships and advertising.

The Best Places to Live Program delivers *must-read* content that is local, credible, and exclusive. The content comes from an annual series of independent, unbiased reader surveys. These surveys gather reader opinions on topics such as:

1. City Satisfaction (for residents only)
2. Other Government Satisfaction
3. Newspaper Satisfaction
4. Health Care Reform
5. Other current topics

Each community's opinions are benchmarked to neighboring, participating communities.

More details about this program can be found at: <http://www.populus.com>. Learn more about Community Insight and its unique mission at: <http://www.communityinsight.com>.

This document contains proprietary information owned by POPULUS related to the Community Insight - Best Places to Live Program – Citizen Satisfaction survey.

INTRODUCTION

Intro1: Welcome to the Best Places to Live Program's Citizen Satisfaction survey.

Make a difference
Complete the survey
See the results in your local newspaper
Find out how your community compares to others

The Best Places to Live Program is a revolutionary community improvement tool. This Program is based on a simple premise:

1. use statistically valid survey methods to find out the community's opinions;
2. benchmark the results to neighboring, participating communities; and,
3. publish the unfiltered results in the local newspaper.

Respondent Bill of Rights

Survey research is a collaboration between researcher and respondent. The researcher promises to report the findings in an unbiased and thorough manner. In addition, the researcher promises to protect the confidentiality of the respondent and to not report individual level results, unless specifically directed to do so by the respondent.

Terms of Use

The respondent agrees to do nothing intentional that will compromise the accuracy of the survey, such as completing more than one survey or intentionally answering a question inaccurately. In the cases where the respondent is asked to indicate their opinion, there are no 'right' or 'wrong' answers. In these instances, the respondent agrees to accurately reflect their opinion at that point in time.

By continuing and participating in this survey, you agree to the terms of use as outlined above.

PersonalIntro: Hello. My name is Paul Butcher and I'm the President of POPULUS. POPULUS is the research company conducting the Best Places to Live Program and this Citizen Satisfaction survey. POPULUS was founded in 1984 and our motto is 'Research of the People, by the People, for the People.'

I want to take this opportunity to personally thank you for participating in this important research initiative. The Best Places to Live Program is an annual series of independent, unbiased community surveys on topics of local interest.

The first survey in this series, the citizen satisfaction survey, will measure a number of local issues, including the performance of your city government (if you live in a city), your satisfaction with your county, state, and federal elected officials, and your satisfaction with your community newspaper. Yes, even the community's opinions regarding their newspaper will be reported IN THEIR ENTIRETY by the newspaper, warts and all. That's the deal. Not only will the results be reported, but they will be compared to other communities that are also participating in this survey.

You may press the 'Next Page' button below to get started.

POPULUS

Intro2: **Your answers do matter.** Please consider each question carefully and respond to the best of your ability.

This survey should take between 25 and 35 minutes to complete. It's not a short survey because we're asking a lot of questions whose answers should be very interesting to your community.

Remember, since you have a single use password, you may stop and restart the survey at any time. You don't need to finish the survey in one setting (please see the instructions below).

Your URL (link) and password can only be used one time, so please don't forward your URL to someone else. If you know of someone that wants to take the survey, send them the URL listed below. The URL below will direct the user to Community Insight which will generate a URL specifically for them with their own single use password.

URL: <http://www.communityinsight.com/BPTLP02/passalong>

Once again, thank you for participating.

Instructions:

Stopping and Re-starting: If at any time you need to exit the survey, you may do so by closing your web browser. To return to the survey, use the same method you used to access the survey originally. The survey will take you to the point where you left off. However, upon returning you will not be able to go back and change earlier responses.

Navigation: To move through this survey, click on the **Next Page** button at the bottom of every page.

Changing Answers: Use the **Back** button on your web browser to change a previous answer. However, if you do change an answer, you must click on the **Next Page** button to record the change. If you use your web browser's **Forward** button, any changes you have made will be ignored. Please note that if you go back to a previous page and change an answer, you will be required to re-enter answers on all subsequent pages.

Skipping a Question: If you miss a question, you will be prompted to make a selection. You will not be able to proceed further through the survey unless you answer every question on each page.

Recruit: How did you hear about this survey? (Please select all that apply.)

The City of Boise Citizen Satisfaction survey asked this same question and came up with the following remarkably similar results.

1. Strongly headed in the wrong direction – 4%
2. Somewhat headed in the wrong direction – 12%
3. Neutral – 6%
4. Somewhat headed in the right direction – 52%
5. Strongly headed in the right direction – 26%

CityIssue: Please select from the issues listed below the one that you believe is the most important issue facing [SCRIPT].

- Public transportation / bus system / rail / trolley
- Traffic / congestion / difficult to get around / too many cars
- Schools / education / funding / overcrowding
- Sprawl / growth beyond boundaries / getting too big too fast / reduction of farmland and open spaces
- Pollution / air quality / water quality / environment in general / global warming
- Crime / drugs / gangs / vandalism / burglary / robbery / assaults / DUI / traffic violations
- Unemployment / bad economy
- Road expansion / upkeep and maintenance / need more roads, stoplights, and signs
- Planning / annexation / zoning
- Government size / taxes
- Supporting current and attracting new businesses
- Budget cutbacks / funding
- Government trust / accountability / transparency
- Don't know

Both of the following two questions use the same question list. This allows us to create a two-dimensional satisfaction / importance grid to ensure resources are applied at not just the low satisfaction items, but those that are also relatively high in importance.

AspectSatisfaction: Please indicate your level of satisfaction with the following characteristics as they relate to [SCRIPT] as a whole (1 = very dissatisfied to 5 = very satisfied).

AspectImportance: Please indicate how important each of the following characteristics of [SCRIPT] are to you, personally (1 = very unimportant to 5 = very important).

1. Having an adequate number of jobs and economic opportunities
2. Having a reasonable cost of living
3. Attracting new businesses / industries
4. The affordability of housing
5. The quality of the air
6. The quality of the drinking water
7. The quality of the ponds, rivers, streams, and underground water
8. The preservation of and access to natural areas such as open space and greenbelts
9. Quality of public education (K-12).
10. Quality, cost, and availability of post high school education (college, trade school, community college)
11. The ability to get around by public transportation
12. Safety of transportation by bike
13. Traffic signal timing
14. Opportunities to participate in community / government matters
15. The availability of city recreational opportunities for youth (such as sports, art programs, and after school programs)
16. The availability of art and cultural opportunities (such as festivals, concerts, museums, etc.)
17. The availability of city parks within walking distance from your home
18. The adequacy of support services for senior citizens (such as senior centers, transportation services, etc.)
19. The quality of existing neighborhoods
20. The ability to find housing close to where you work
21. Vibrancy of downtown
22. Safety in downtown
23. Vibrancy of neighborhoods
24. Safety in neighborhoods
25. Programs for residents with disabilities
26. The cleanliness

- 27. Shopping opportunities
- 28. Entertainment opportunities
- 29. Recreation opportunities
- 30. The amount of crime (e.g., gangs, drugs vandalism, graffiti, burglary, robbery, traffic violations, assaults, rapes, attacks, etc.)
- 31. Good planning for future growth
- 32. Being a good place to raise children

Gap Analysis sorted for Boise.

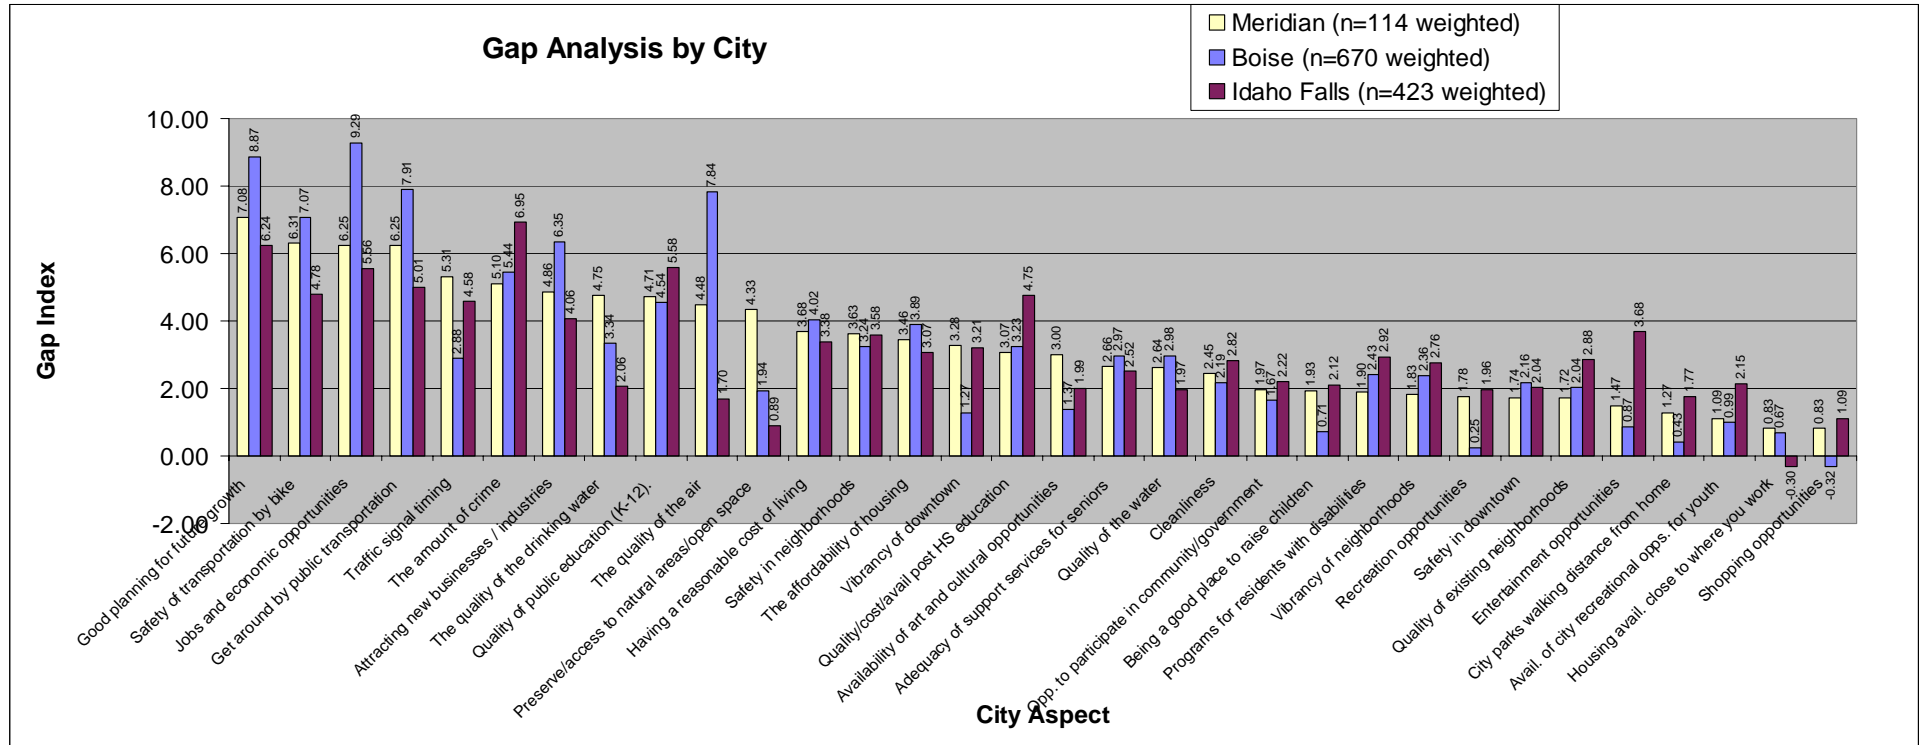

Note: Items designated with a “BCS” above also were measured in the city of Boise 2009 Citizen Survey. If a number also appears, it is the order of priority of the top eight items identified in the city of Boise survey.

Gap Analysis sorted for Idaho Falls.

Gap Analysis sorted for Meridian

CityServicePayment: If revenue does not keep pace with growth and demand for services, how would you prefer [SCRIPT] balance their budget? You may select up to three choices.

- ☐ Raise my taxes
- ☐ Raise someone else's taxes
- ☐ Charge user fees
- ☐ Reduce or eliminate services
- ☐ Borrow money (increase debt, also known as deficit spending)
- ☐ Reduce wages and/or benefits
- ☐ Layoff employees

OtherServicePayment: If revenue does not keep pace with growth and demand for services, how would you prefer each of the governmental agencies listed below balance their budget? You may select up to three items for each governmental agency.

Agencies displayed:

1. County government
2. [State Name] government
3. Federal government

Choices:

- ☐ Raise my taxes
- ☐ Raise someone else's taxes
- ☐ Charge user fees
- ☐ Reduce or eliminate services
- ☐ Borrow money (increase debt, also known as deficit spending)
- ☐ Reduce wages and/or benefits
- ☐ Layoff employees

HEALTH CARE (Idaho Falls only)

HealthGrid2: How satisfied are you personally with the following aspects of health care in the United States (very dissatisfied to very satisfied)?

1. The quality of the health care I receive
2. How quickly I'm able to see a doctor when I want to
3. The amount of money I have to pay to see a doctor or have a medical procedure
4. The amount of money I pay for health insurance
5. The ability to see specialists when I want to

| Summary of Means (1=Very dissatisfied, 5=Very satisfied) | Liberal (n=114) | Moderate (n=234) | Conser- vative (n=239) | Total (n=587) |
|--|--------------------|---------------------|------------------------------|------------------|
| | Mean | Mean | Mean | Mean |
| HealthGrid2_r1 The quality of the health care I receive | 3.5 | 3.8 | 4.2 | 3.9 |
| HealthGrid2_r2 How quickly I'm able to see a doctor when I want to | 3.6 | 3.7 | 4.1 | 3.8 |
| HealthGrid2_r3 The amount of money I have to pay to see a doctor or have a medical procedure | 2.3 | 2.5 | 3.0 | 2.7 |
| HealthGrid2_r4 The amount of money I pay for health insurance | 2.4 | 2.5 | 2.9 | 2.6 |
| HealthGrid2_r5 The ability to see specialists when I want to | 3.5 | 3.6 | 4.0 | 3.8 |

HealthGrid1: Please indicate how much you agree or disagree with each of the following statements (strongly disagree to strongly agree plus don't know).

1. The federal government will do more harm than good by providing a separate government run health plan
2. My present health care situation can't get any worse
3. I'm scared to be without health insurance
4. A government run health care option will be fair to existing health care providers
5. A government run health care plan will increase competition among health insurance providers and lower insurance premiums
6. An overhaul of our health care system will reduce the quality of care I presently receive
7. An overhaul of our health care system will increase the amount of out-of-pocket expenses I pay
8. An overhaul of our health care system will limit my options in choosing doctors
9. An overhaul of the health care system will result in higher taxes
10. I like our health care system just the way it is
11. There is nothing that can be done to improve our health care system
12. We need MORE government involvement in health care to make our system better (e.g. separate government run plan, more oversight of private carriers, more oversight of individuals, etc.)
13. We need LESS government involvement in health care to make our system better (e.g. allow providers to compete across state lines)
14. Everyone should be required to purchase health insurance, pay a fine, or go to jail
15. If every man, woman, and child in the US is covered by health insurance and no significant changes are made to the availability of health services, the health service industry will be overwhelmed resulting in longer wait times for doctor visits and treatment.
16. If more medical schools and nursing schools were accredited producing more health care professionals, health care costs would go down due to the increased supply of service providers.
17. If more medical schools and nursing schools were accredited producing more health care professionals, health care quality would be reduced so much that many peoples' health will suffer.
18. Health care reform is so important it must be accomplished quickly (e.g., within 60 days)
19. Health care reform is so important it must be done slowly (e.g. no faster than 6 months)
20. Health care cooperatives should be encouraged as a means of providing more affordable health insurance to more people
21. If administrative processes were streamlined in the health care industry, costs could be reduced and not impact health care profits
22. Employee provided health care should be taxed
23. Employers should be required to provide health insurance to all employees or be taxed
24. If all employers are required to provide health insurance for their employees, prices of goods and services will rise and jobs will be lost
25. A government run medical insurance plan, with similar benefits to private plans at a significantly lower cost to the insured, will ultimately run private providers out of business
26. The federal government should be required to balance the budget every year

27. Members of congress should be required to participate in the same programs as they provide for their constituents (e.g. Social Security, health care, etc.)

| Summary of Means (1=Disagree completely, 5 = Agree completely) <i>sorted descending by 'Total' column</i> | Liberal (n=114) Mean | Moderate (n=234) Mean | Conser- vative (n=239) Mean | Total (n=587) Mean |

HealthCarePay: If the government passes some form of health care legislation how would you prefer they pay for it? You may select up to three answers.

- ☐ Raise my taxes
- ☐ Raise someone else's taxes
- ☐ Reduce or eliminate non-health care services
- ☐ Borrow money (increase debt, also known as deficit spending)
- ☐ Reduce wages and/or benefits for federal employees
- ☐ Layoff federal employees

Community: Community Insight™ is a web-based panel of local citizens who are interested in providing feedback on issues or topics that affect our community and seeing the entire aggregated results of the feedback.

The mission of Community Insight™ is to enhance the trust between the people in the community and the local government, media, non-profit organizations, employers, and merchants. Community Insight™ enhances this trust by increasing the accountability and transparency of the organizations through the unbiased and scientifically valid collection and reporting of the opinions, preferences, and beliefs of the people within the community.

Being a part of this panel, would simply mean responding to occasional brief online surveys about topics of interest in our community. The surveys would come through email invitations. Please indicate whether or not you would like to join the Community Insight™ research panel.

1. Yes, I would like to join.
2. No, I am not interested in joining at this time.

Confirmation: **You are ready to submit your answers.**

By clicking the Next Page button below, you attest that you completed no more than one survey and have answered all questions in this survey accurately, honestly, and to the best of your ability, reflecting your opinions at the time you answered the questions.

If you would like to change any of your responses, please use the Back button on your web browser to go to that question and make the change. If you do go back and change an answer, you will be required to re-enter answers on subsequent pages.

If you are ready to submit your answers, please click the Next Page button below. You will not be able to make further changes once you do.

POPULUS

Appendix A

Weighting Survey Data to the Census

The basic premise behind probability sampling is that each household has a known and non-zero probability of selection. In convenience sampled Web-based surveys, all households do not have an equal probability of selection. Therefore, post-stratification weighting is used to adjust the sample to match the target population estimates in each Census category.

Weighting is a statistical procedure that attempts to account for non-response by assigning differential weights to the data depending on the response rates.

Weighting was only done for those people that live within the city limits of Idaho Falls, Boise, and Meridian. Insufficient completed surveys were received from other cities to permit a reliable weighting. This weighting was only used when reporting the results from the City Satisfaction section of the survey. All other respondents and all other reporting is done using no weighting.

Best Places to Live Program Respondent Basic Demographic Profile Idaho Falls, ID Post-stratification Weighting for Gender / Age Distribution

| | Survey (n=443) | | |
|----------------------|----------------|-------------------|-----------------|
| | US Census | Survey Unweighted | Survey Weighted |
| Male | 49.2 | 50.7 | 49.2 |
| Female | 50.8 | 49.3 | 50.8 |
| 18 - 34 years | 36.0 | 5.2 | 36.0 |
| 35 - 54 years | 34.2 | 34.4 | 34.2 |
| 55 years and older | 29.8 | 60.4 | 29.8 |
| Less than \$35,000 | 37.1 | 11.8 | 37.1 |
| \$35,000 to \$74,999 | 37.4 | 35.3 | 37.4 |
| \$75,000 and more | 25.5 | 52.9 | 25.5 |

Note: Census figures from American FactFinder ACS July 1, 2007 (est.), available at www.census.gov.

Weighted results reflect post-stratification adjustments for county, gender, age, household type and income.

These cells contain too few respondents to be weighted reliably.

Responsibilities in Reporting to Clients and the Public

Council of American Survey Research Organizations (www.casro.org)

In accordance with CASRO standards, the following information is provided to allow the public to make a reasonable assessment of the reported findings. Any public release of survey findings should include the exact wording of the questions used and the following information. Please note that this survey is a copyrighted work. Nothing contained in this document may be copied in part or in whole without written consent from POPULUS.

The Community Insight Best Places to Live Citizen Satisfaction Survey is brought to you by POPULUS – Research of the People, by the People, for the people (<http://www.populus.com>), the Idaho Statesman (<http://www.idahostatesman.com>), and the Post Register (<http://www.postregister.com>). The Idaho Statesman and the Post Register are the two largest newspapers in the state of Idaho. The purpose of this survey is to gain insight into the preferences and opinions of citizen communities within the state of Idaho in order to both inform the populous and the institutions that serve them because better information leads to better decisions which leads to better results.

Three distinct sample sources were used for this survey. First, each participating newspaper ran advertisements in both their online and offline publications inviting readers to participate in the survey. Second, email invitations were sent to the email lists provided by each participating newspaper. Finally, the Community Insight panel members were each sent an invitation to participate. The Community Insight panel is a panel of individuals across the state of Idaho that have volunteered to take surveys for the purpose of bettering their communities (<http://www.communityinsight.com>). The actual number of completed surveys as of 10/26/09 for each sample source are as follows.

Entity Identity

| | | Frequency | Percent | Valid Percent | Cumulative Percent |
|-------|-------------------|-----------|---------|---------------|--------------------|
| Valid | 2 Idaho Statesman | 837 | 41.1 | 41.1 | 41.1 |
| | 3 Post Register | 852 | 41.8 | 41.8 | 83.0 |
| | 4 Existing Panel | 347 | 17.0 | 17.0 | 100.0 |
| | Total | 2036 | 100.0 | 100.0 | |

Surveys were collected according to the following schedule: Post Register, August 28, 2009 – September 24, 2009; Idaho Statesman, September 25, 2009 – October 17, 2009; and, the Community Insight panel, September 26, 2009 – October 17, 2009.

The Community Insight community was created and is maintained by POPULUS in order to facilitate community-focused survey-based research in order to help communities prosper.

Suggested verbiage to accompany articles.

The Community Insight Best Places to Live Citizen Satisfaction Survey gathered 2,040 surveys between the dates of August 28 and October 17, 2009. Respondents were recruited from readers of the Post Register (41.8%) and Idaho Statesman (41.1%) newspapers as well as from the Community Insight panel (17.1%). All surveys were conducted online utilizing above industry standard measures to ensure only one survey is completed per email address. The margin of error and confidence level for this survey related to the readers of the Post Register and Idaho Statesman are 3% and 95% respectively. What this means is that if this survey were repeated 100 times using the exact same techniques, the reported answers would vary by no more than 3% 95 out of the 100 times. The margin of error and confidence level for Idaho Falls and Boise city general populations are 5% and 90% respectively. More information related to the survey can be found at: ...

Note: Whenever results are quoted in an article, be sure to print the precise text of the question and ALL of the possible responses.
